## Standardisation in Preparation Item List for Efficient Site Work

“Preparation Item List” is a list of equipment, tools, items and consumables that are necessary at site. This list is used for shipping list as well. If such list is prepared without rule or it is prepared based on experience of equipment manager, necessary item might run out or excessive items might be brought to site. In order to prevent such problems, GIKEN developed the “PAC-Lister” as the software that can make the list of necessary items and quantity just by entering site conditions such as pile section and pile length.

By PAC-Lister will standardise this preparation work and will make the most appropriate item list in the quickest manner to improve work efficiency.

Before PAC-Lister is adopted

Site productivity depends on  
how much well-prepared!

After PAC-Lister is adopted
