Silent Piling

## Office Work Software for Quick and Accurate Calculation Higher Cost-Awareness by Definitive Target for Efficient Management

In order to survive in severe price competition, it is important to control management with numerical values rather than rough estimates. First of all, it is necessary to estimate machine and labour budget based on internal cost with full recognition about site condition. Then, it is necessary to plan own work schedule with budget that can tell the work methodologies, the equipment models, number of work force, time schedule and the budget. Once the project starts, it is important to check the progress with numerical values against the plan for prompt countermeasures against any delay.

GIKEN originally developed this software, "SP-Manager", to control works for pricing, scheduling, budgeting and recording. This software will make you enable to prepare necessary documents and tables easily, quickly and accurately. The data in this software will be useful for self-evaluation and own standard for pricing. "SP-Manager" will make your employees more cost conscious and risk conscious in order for your organisation to become more productive.
