

GRB Overhead Clearance Method

In GRB Overhead Clearance Method, piling work can be carried out safely under overhead obstruction without disturbing active traffics, because all machines are light weighted and compact, and Silent Piler holds pile being pressed-in at the close position to the pile top elevation of design. In case the overhead clearance is very limited, a dedicated Silent Piler, Clear Piler, can be used.

Clear Piler Models

CL70

CLF120

CLH150

CLP200
